

The Future of Route 63

Purpose of Today's Hearing

Welcome!

Today's public hearing will help you learn more about the preferred alternative for the Route 63 Draft Environmental Impact Statement.

MoDOT began this study in November 2006 in order to develop a transportation solution that balances community needs with technical, environmental and regulatory constraints.

Your comments have been extremely important as team members worked toward developing the preferred alternative, and we ask again for your input tonight.

As you move through the displays, please share your questions and ideas with MoDOT representatives.

Following this meeting, MoDOT will address substantive public and agency comments, complete the remaining environmental surveys and make a final recommendation on the preferred alternative. This includes documenting the conclusion of the process with a Record of Decision.

We anticipate having a record of decision in late 2009.
